

BVLOS MISSING ARTIFACT FIXTURE

Mission Verdict:

• REVIEW REQUIRED

Modeled feasibility is acceptable, but operator, regulatory, or evidence review items remain.

Decision support only; the generated evidence bundle remains the source of truth.

Next operator action

Complete the listed review items, confirm regulatory readiness outside ORBITAL, then record the operator decision.

REVIEW ORDER

Verdict -> top constraint -> trust signals -> artifacts -> checksum

1

Verdict

Mission verdict and next operator action

2

Top constraint

Wind / weather margin, PASS, margin 3.6 m/s

3

Trust signals

Readiness, assumptions, and warnings

4

Artifacts

Open the first artifact, then raw evidence

5

Checksum

Verify manifest and checksum evidence

CHECKSUM

VERIFY REQUIRED

Run bundle checksum verification after generation and before archiving or sharing the evidence bundle.

Why This Verdict?

The verdict is REVIEW REQUIRED because modeled feasibility is GO but regulatory readiness, missing evidence, or bundle warnings still need operator attention.

MODELED MISSION STATUS

GO - MODIFY if not GO.

REGULATORY READINESS

DOCUMENTED REVIEW REQUIRED - REVIEW REQUIRED when OPERATOR_ACTION_REQUIRED.

MISSING EVIDENCE

1 item(s) - REVIEW REQUIRED when greater than 0.

BUNDLE WARNINGS

1 warning(s) - REVIEW REQUIRED when greater than 0.

MODELED MISSION STATUS

GO

MISSION RISK

LOW

TOP LIMITING CONSTRAINT

Wind / weather
margin, PASS,
margin 3.6 m/s

REGULATORY READINESS

DOCUMENTED
REVIEW REQUIRED

Feasibility

Modeled mission feasibility and the constraint most likely to limit release.

MODELED STATUS

GO

MISSION RISK

LOW

TOP CONSTRAINT

Wind / weather
margin, PASS, margin
3.6 m/s

Product Boundary

- This UI is a local review surface for ORBITAL evidence bundles.
- It is a demo and discovery aid, not a full SaaS product.
- ORBITAL remains decision support, not approval, authorization, LAANC, legal advice, or operational clearance.
- Opening, clicking, or reviewing an artifact does not approve a mission.
- Review fields are documentation-only records.
- No accounts, databases, auth, editing workflows, live integrations, approvals, or signoff actions are provided.
- Markdown, JSON, CSV, KML, PNG, manifest, checksum, and dashboard artifacts remain accessible outside this UI.

Manifest Compatibility

UI SCHEMA

1

REQUIRED UI FIELDS

15 expected

FALLBACK FIELDS

15 documented

Every optional UI field must render explicit fallback text such as 'not provided', 'n/a', 'UNKNOWN', or 'unavailable'; optional fields must not render as blank labels.

Outside-UI access: markdown, json, csv, kml, png, manifest, checksum, dashboard.

Unavailable artifacts render as non-link unavailable labels in the review UI and Markdown dashboard; they must not be emitted as hrefs.

Model Assumptions

Battery / energy model

Battery feasibility is based on the configured capacity, initial charge, reserve policy, and simplified power model coe...

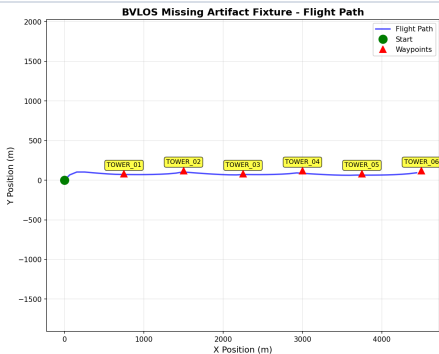

Confirm aircraft battery health, payload draw, temperature effects, and abort reserve outside ORBITAL before...

Wind / weather model

Wind feasibility compares the modeled or weather-provided wind exposure against the configured safe operating limit.
Refresh field weather and gust observations close to launch, especially when offline or sample weather is use...

Geofence / no-fly-zone model

Geofence feasibility treats configured polygons and imported GeoJSON zones as the planning boundary source.
Confirm site boundaries, customer buffers, and launch/recovery areas on current maps before export or dispatc...

Route preview from the generated evidence bundle.
